

CAD ACTIVATION

Automate Recording Based on Dispatch Calls

Merging CAD Data with our Body Cameras and Rocket In-Car Video for Enhanced Automation

CAD INTEGRATION

- Bringing CAD information into the POLARIS Cloud, such as: Call ID, Call Type, Priority of Call, Address and Dispatch information.
- As CAD calls come in, they are visible on the POLARIS live map.

CAD ACTIVATION

- As CAD calls are assigned, the automation process can begin. When an officer is dispatched to an incident, their EOS and Rocket video automatically starts recording and tags it with the CAD Incident.
- For High Priority Calls, an Action Zone with a pre-defined radius will automate, triggering recording and tagging of all video devices that enter the zone.

AUTO TAGGING & CLASSIFICATION

- For video not activated by a CAD call, the system can link to a CAD call based on start time, dispatch time, and officer ID.

GET THE VIDEO

Guarantees video will be recorded when its needed most.

KEEP THE VIDEO

Alleviates the officer from having to manually classify the video after-the-fact, maintaining accuracy and safeguarding retention.

FIND THE VIDEO

Easily searchable in POLARIS by classification, case #, call ID, report number, as well as related videos.
